

TABLE-TOP CONFERENCE SYSTEM FOR DISCUSSION APPLICATIONS

Design and digital audio quality fused in D-Cerno

The newest addition to Televic Conference's range of solutions for the audio conferencing market.

»» In many ways D-Cerno is unique as it is the first entry-level discussion system that is based on digital technology. It contains the experience and technologies of Televic's higher-positioned flagship products.

Apart from its excellent audio quality, the D-Cerno system offers a stylish look that integrates with any environment. The combination of technological excellence and stylish design is quite unique and comes as a relief to those on a tight budget who don't want to compromise on any of these two areas.

Easy set-up

D-Cerno offers meeting organisers and participants a system that sets-up in minutes, is intuitive to use, offers superior audio quality and is pleasing to the eye. The system works out-of-the-box; no additional set-up is required. The control of the system is easy and intuitive via its LCD screen and icon-based menu on the central unit.

Cabling is in daisy-chain and with the automatic port detection the installer does not have to worry about IN or OUT, thus eliminating cabling errors. When the daisy-chain is closed creating a loop cabling, a patent-pending technique becomes active

Patent-pending redundancy technology avoids interruptions due to cable or unit failure.

D-Cerno delegate stations and central unit: A matching design.

which offers redundancy and guarantees that the system will continue to work even if a cable is broken. In line with D-Cerno's focus on design and visual appearance, the cable connections have been hidden in the base of the unit.

The prolonged use by many different people can be a cause of concern from a hygiene point of view. D-Cerno has therefore been equipped with touch sensor technology, eliminating the use of traditional buttons and thus the gaps around them where dirt and bacteria can accumulate. The result is a perfectly smooth touch surface that can easily be wiped and disinfected before each meeting. As a bonus this technology shows no wear over time and does not produce annoying clicking sounds when switching on or off the microphone.

It is also important to note that the D-Cerno delegate and chairman units use a microphone that is shielded from interference from mobile phones. Here Televic borrowed the shielding technology from its top level products, a shielding technology claimed by many Televic users to be the best in the industry.

The central unit perfectly matches the delegate units in design and can therefore be placed on the meeting table without being obtrusive. It has no fans inside so it is absolutely quiet, even after years of intensive use. So it can be placed

close to the chairman or secretary without any concern.

For those who are looking for a more elaborate solution, the D-Cerno CU-R is worth looking at as it offers on-board recording. The recording of the meeting takes place on memory sticks via the USB ports located on the front of the unit. To avoid any loss of recorded audio two ports have been provided: When one USB memory is full, the unit switches over to the second one and the first can be safely removed.

D-Cerno is ideal for use in smaller gatherings, such as corporate board meetings or town council meetings. As it sets up really fast and easily, with few technical skills required, congress centres and hotels will also find D-Cerno perfect to equip their meeting rooms. ■
